
SOFTWARE TEST ENGINEER

Department: Software Development
Job level: Middle/Senior

We are looking for a Software Test Engineer who will be involved in the quality assurance stage of software development and deployment. The person will work together with Development to understand requirements, design & code appropriate test scenarios and conduct automated and manual tests to ensure the software created by developers is bug-free and meets requirements.

Day-to-day work:

- Meet project stakeholders to understand requirements and scope of projects
- Work with software developers to understand the areas of functionality that need to be tested
- Design test scenarios that will cover functional requirements
- Design web browser automation test-scripts as well
- Additionally, design test scenarios that will ensure a good product is released (like corner-case testing, boundary testing) as well as, when required, non-functional testing (performance & stress testing)
- Select the right strategy and/or technologies to develop the test scenarios
- Write and execute automated test scenarios, as well as run manual tests when needed
- Write/generate/automate test reports
- For released products, develop new tests to prevent reissuance of bugs (regression testing)
- Create, install, configure, maintain and backup the testing platforms

Skills and knowledge:

- Experience with at least one Testing Automation framework (e.g. Cucumber)
- Experience with automated web browser/UI testing frameworks (e.g. Watir)
- Experience with Continuous Integration frameworks (e.g. Jenkins)
- ANT – for Build Automation
- Ability to multi-task/work on concurrent projects
- Interest in learning new technologies as the context/clients may demand

What we offer:

- Access to courses and certifications depending on the need

- Opportunity to learn and work with a variety of technologies
- Flexible business hours and work from home

We invite you to send us the updated CV at: hr@acrom.ro
